

# getting movies

Convert movies from YouTube or other movie sites by taking the following steps. Be sure to respect the site's user agreement.

1. Go to the movie site such as YouTube: <http://www.youtube.com/>
2. Type in the topic and click on the Search button:

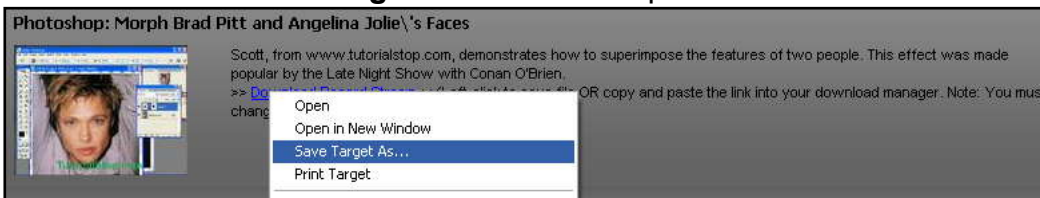

3. When you find a movie you want to save on your computer, select the URL and choose Ctrl + C (shortcut for copy)

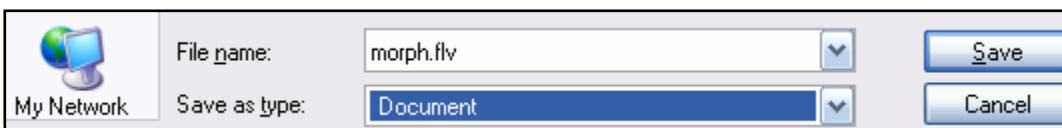

4. Go to <http://youtubex.com/>
5. Click in the Download section and choose Ctrl+ V (shortcut for paste)

6. Once you have pasted the web address of the video from YouTube, click on the Download Video button.
7. When information pops up underneath the download option, right click on the Download link and choose **Save Target As** from the drop down menu.

8. Navigate to a safe place on your computer and name the movie. You must add .flv to the name. See the example below. Adding a .flv makes it a Flash movie.

9. If you want to convert it from Flash to another video format, visit <http://media-convert.com/convert/>
10. In the **File** section, browse for the Flash movie or whatever file you want to convert. It should detect the **Input** format. If not, select the input format by clicking on the drop down arrow associated with that option.

11. Scroll down until you find the **Output** format and the acceptance of terms. You must accept their terms or you won't be able to get the conversion. Windows Media Video was selected as the Output format so that it can be imported into Movie Maker for projects.

12. After clicking OK, be patient! Depending on the file size, it could take a while. Read a book while you wait if necessary.

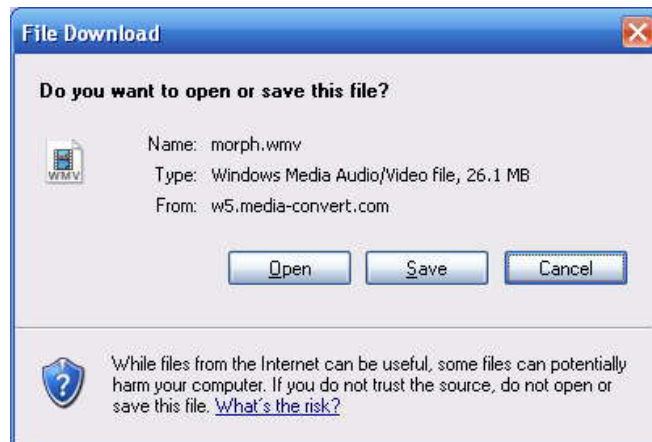

13. A little window will show the download status.

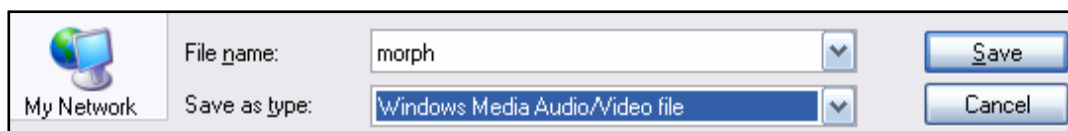

14. Once it is converted, you can save the converted movie by clicking on the **Download** button that will appear if the conversion was successfully converted.

15. Click on the **Save** button when the **File Download** Window appears.

16. Navigate to a safe place on your computer and type in an appropriate name in the File Name section and then click Save.

17. If you successfully completed the above steps, you should be able to open your converted movie.
